

Sofia allows healthcare professionals to create their clinical notes using artificial intelligence !

The appointment with your professional could be recorded, so that the clinical note can be created with the help of AI.

You must give your verbal consent in order to record the visit.

The visit will be recorded in encrypted data on servers located in Quebec.

The clinical note will then be created based on the recording!

The recording will be kept only temporarily on the servers before being deleted automatically.

Sofia is a tool that allows your healthcare professional to save time and focus on what's important!
